NATIONAL ORGAN TRANSPLANT PROGRAMME

With 38 donors and over 80 transplant procedures per million population, the Croatian organ transplant programme is one of the most successful ones in the world.

The programme has gradually gained international recognition through systematic implementation of a series of organisational measures, good practices and an efficient national resources (donated organs) management model.

This brochure provides a short overview of the activities and results achieved in the field of organ donation and transplantation in 2016.

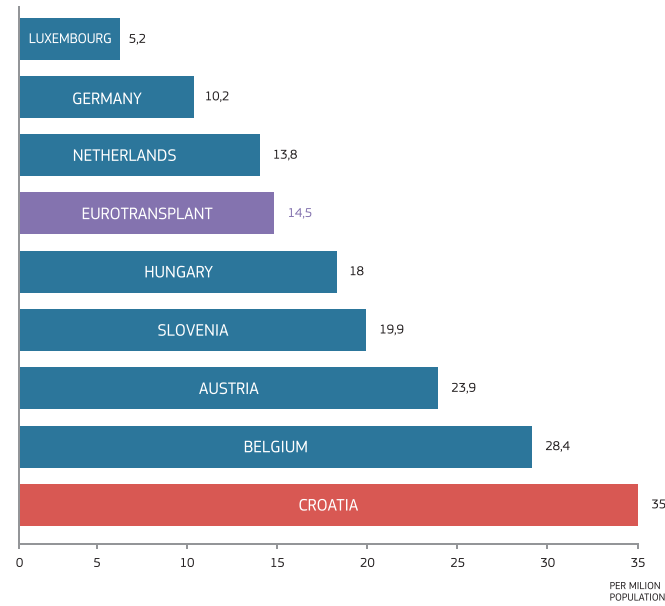

COOPERATION WITH EUROTRANSPLANT

Together with seven other Eurotransplant member states, Croatia participates in international organ exchange based on the principles of solidarity and reciprocity.

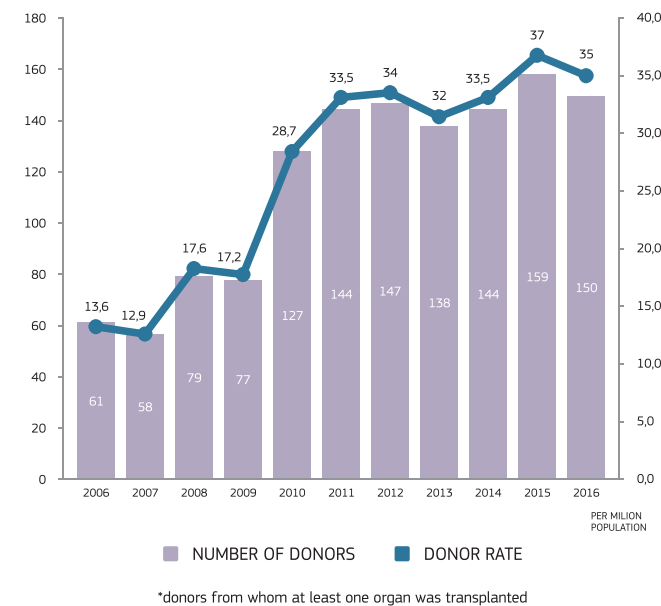

Eurotransplant is an international organisation which manages a central information system for organ donation, based on unique ethical and professional criteria for organ allocation, agreed on by all Eurotransplant members.
